The invention relates to detergent compositions comprising one compression and a phenol oxidising enzyme having at least 68% identity to the Stachybotrys chartarum phenol oxidising enzyme. Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile another during detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, bleaching the colour of stains on fabric and in detergent and textile

                                                                                                                                                                                                                                                                                                                                                                AAF30028). The invention provides phenol oxidising enzymes such as phenol oxidase B, or enzymes having at least 68% identity to it, nucleic acids encoding them, expression vectors, filamentous fungus and yeast host cells, and methods for the recombinant production of the phenol oxidising enzymes. The enzymes are useful for bleaching pulp and paper, fabric stains, and in detergent and textile applications. They show optimal activity at pH range 5-11, 7-10.5 or 8-10, and at 20-60 or 20-40 degree C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New phenol oxidizing enzyme, also useful in the detergent, paper pulp, textile or food industries, especially in modifying the colassociated with dyes and coloured compounds, as well as in anti-cassociated with dyes and coloured compounds.
                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                   The present sequence was used for comparison with the Stachybotrys chartarum phenol oxidising enzyme. The invention relates to detergent compositions comprising one or more surfactants and a phenol oxidising enzyme having at least 68% identity to the Stachybotrys chartarum phenol oxidising enzyme nazyme. Phenol oxidising enzymes may be used in the detergent paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to another during;
                                                                             detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pul and paper bleaching, bleaching, the colour of stains on fabric and in detergent and textile applications.

The enzyme has the CBS accession number 157.72. The enzyme catalyses redox reactions and is specific for molecular oxygen as the electron acceptor. The phenol oxidising enzy is specifically used in detergents for bleaching entrains on fabrics, but also for bleaching pulp and paper and for decolourisation of plant-derived food products. The enzyme has a pH optimum in the plant-derived food products. The enzyme has a pH optimum in the almopunds, e.g. porphyrins, tannins, polyphenols, carotenoids, anthocyanins and Maillard reaction products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phenol-oxidizing enzyme from Acremonium, for bleaching stains on fabrics -

                                                                                                                                                                                                                                                                                                                       phenol oxidising enzyme. The invention relates to detergent compositions comprising novel phenol oxidising enzymes that have at least 60% identity with the phenol oxidising enzyme of Stachybotrys chartarum (see ANY9537), and which are obtained from a bacterium, yeast or non-Stachybotrys fungus, especially B. spicifera, Curvularia pallescens (see ANY95539) and Amerosporium atrum (see ANY95540). The phenol oxidising enzyme is capable of modifying the colour associated with dyes or coloured compounds, and can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile
                                                                                                                                                                                                               fabric and for anti-dye transfer in detergent and textile applications. It may also be capable of modifying the colour in the absence or presence of an enhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detergent composition comprising novel phenol oxidising enzyme obtained from fungus or bacteria, useful for pulp and paper bleaching, bleaching color of stains on fabric and for anti-dye redeposition -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bipolarius spicifera phenol oxidising enzyme.

Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to the Stachybotrys chartarum DNA (AAA51313) are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or coloured compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the Curvularia pallescens phenol oxidising enzyme. The invention relates to detergent compositions comprising novel phenol oxidising enzymes that have at least 60% identity with the phenol oxidising enzyme of Stachybotrys chartarum (see AAY95537), and which are obtained from a bacterium, yeast or non-Stachybotrys fungus, especially C. pallescens.

Elipolarius spicifera (see AAY95538) and Amerosporium atrum (see AAY95540). The phenol oxidising enzyme is capable of modifying the colour associated with dyes or coloured compounds, and can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile applications. It may also be capable of modifying the colour in the absence or presence of an enhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, and

                                                                                                                                                                                                                       This sequence is the Curvularia pallescens phenol oxidizing enzyme. Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to the Stachybotrys chartarum DNA (AAA51313) are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or coloured compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.

Detergent composition containing to bleach stains and prevent dye phenol or transfer oxidase from Stachybotrys, used

Claim 16; Fig 5; 56pp; English.

The present invention describes a detergent composition containing purified bhenol oxidising enzyme derived from Stachybotrys. The presequence represents Stachybotrys chartarum phenol oxidising enzyme enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removistains, e.g. food, tea, blood etc., from fabrics) and for preventir transfer fabric washing The present enzyme. The removing Ø

The invention is used to modify a coloured compound prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, text and food industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel enzyme for modifying coloured dye-transfer - \ensuremath{^{\circ}}

The phenol oxidising enzyme is capable of modifying the colour associated with dyes or coloured compounds, and can be used for pulp and part higher the coloured compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detergent composition comprising novel phenol oxidising enzyme obtained from fungus or bacteria, useful for pulp and paper bleaching, bleaching color of stains on fabric and for anti-dye redeposition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

The sequence represents a Tailoring gene product, an oxidase, CC everg. The protein comprises one of 98 enzymes of the CC everninomicin antibiotic biosynthetic pathway. A vector comprising a CC M. carbonacca everninomicin biosynthetic pathway resistance gene product is useful for selecting for a transfected or transformed host cell. An cintegrative version of the vector is useful for introducing a cyarninomicin pathway gene (a bottle-neck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is cuseful for synthesising novel everninomicin-related compounds, arising cfrom modifications of the DNA sequence designed to change glycosyl and condified orsellinic acid groups contained in everninomicin, for expressing functional or mutant everninomicin biosynthetic enzyme for evaluation, diagnosis and preferably biosynthesis of everninomicin or cother secondary metabolic products, improving the yield of everninomicins of the produce novel everninomicins and also as a hybridisation probe to identify homologous sequences. The encoded polypeptides are useful for combinatorial biosynthesis to generate libraries of orthomycins, e.g. ceverninomicin analogues/homologues and drug discovery. The DNA encoding the integrase allows for increasing a given gene dosage. The integrate genes which increase the yield of known products or to generate coverly such as hybrid antibiotics or other novel secondary metabolites or order to carry out bioconversions with compounds to which the strain is normally sensitive and is thus useful in fermentation or compounds to processes involving a given gene and to carry out bioconversions with compounds to which the strain is normally sensitive and is thus useful in fermentation or carries and integrate and is thus useful in fermentation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid molecules encoding everninomicin pathway gene products, useful for improving yields of everninomicin, to proverninomicin and as probes to identify homologous sequences -

                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of nucleotide and protein ... sequences from the Coryneform bacterium Corynebacterium glutamicum, These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described to the coryneits of the inventor of the protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the protein described to the coryneits of the inventor of the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the inventor of the present sequence is a protein described to the coryneits of the coryneits 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C glutamicum protein fragment
                                                                                                                                                                                                                                                                                                                                       in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (KYOW
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nakagawa S,
